

HLC Energies Website Documentation Pack

Domain: hlcenergies.com

Company: HLC Energias Renováveis e Infraestruturas, LDA

Design direction: Evostel-inspired visual and interaction system, adapted to HLC branding and approved content

Primary market: Republic of Mozambique

Languages: Portuguese (authoritative) and English (translation)

Status: Build-ready documentation; publication remains subject to human approval

Purpose

This package gives design, content and development agents the controlled information required to build the HLC Energies website without inventing facts or misattributing CC1 experience.

Document order

1. 00_README.md — package map and governance
2. 01_WEBSITE_BRIEF.md — business objective, audience, scope and success criteria
3. 02_INFORMATION_ARCHITECTURE.md — sitemap, homepage sequence and page requirements
4. 03_DESIGN_DIRECTION.md — Evostel-inspired visual system and interaction constraints
5. 04_FUNCTIONAL_TECHNICAL_REQUIREMENTS.md — features, architecture, performance and delivery requirements
6. 05_SEO_ACCESSIBILITY_SECURITY.md — metadata, accessibility, security, privacy and compliance
7. 06_ASSET_APPROVAL_REGISTER.md — required assets, ownership and approval controls
8. 07_QA_ACCEPTANCE_CRITERIA.md — release gates and test checklist
9. 08_IMPLEMENTATION_PLAN.md — ordered implementation tasks
10. 09_AGENT_MASTER_PROMPT.md — copy-paste instruction for the website-building agent
11. COPY.md — authoritative website copy and factual source-of-truth
12. COPY.pdf — PDF version of the copy pack
13. WEBSITE_DOCUMENTATION_PACK.pdf — consolidated PDF handoff

Source hierarchy

1. COPY.md
2. Approved HLC Company Profile.pdf
3. Supplied CC1 Vinh Tan 4 project page
4. This requirements pack

If documents conflict on company facts, COPY.md prevails. If a fact is absent from COPY.md, the agent must not invent it.

Non-negotiable content controls

- HLC and CC1 are separate entities with distinct roles.
- CC1 projects must never be presented as HLC-executed projects.
- CC1 statistics, certifications, clients and experience must not be attributed to HLC.
- Do not claim completed HLC projects in Mozambique.
- Do not create telephone numbers, social accounts, offices, partners, services or statistics.
- Portuguese is authoritative; English must remain a faithful translation.
- CC1 photographs and logos require permission before publication.

- Legal identifiers and representative details require final publication approval.

Product principle

Build a simple, premium institutional website. Copy Evostel's clarity and interaction language, not its content, claims, statistics or colour palette.

Recommended implementation priority

1. Static bilingual institutional website
2. Fast mobile performance
3. Approved project-reference presentation
4. Contact form with reliable delivery and anti-spam
5. Lightweight content maintenance

Do not add a complex CMS, investor portal, customer account system, live chat or news workflow in version 1 unless separately approved.

HLC Energies Website Brief

1. Objective

Create a credible bilingual institutional website for HLC Energias Renováveis e Infraestruturas, LDA at hlcenergies.com.

The website must explain:

- who HLC is;
- HLC's legal and operational role in Mozambique;
- the HLC–CC1 Consortium model;
- approved areas of interest;
- CC1's separately attributed technical capability and reference projects;
- HLC's long-term commitment to Mozambique;
- how stakeholders can contact HLC.

2. Business impact

The site should strengthen confidence among:

- Mozambican national and provincial authorities;
- energy-sector stakeholders;
- potential clients and project partners;
- investors and financiers reviewing company credibility;
- contractors, technical partners and national suppliers;
- prospective Mozambican employees and technical personnel.

Primary value: institutional credibility and business-development support. The website is not an e-commerce product and should not be optimized around consumer sales.

3. Positioning

HLC is presented as a Mozambican contracting and local-execution entity for energy, infrastructure and construction projects of the HLC Group and its technical partners in Mozambique.

For energy and infrastructure projects in Mozambique, HLC operates under a contractual Consortium with Construction Corporation No. 1 – JSC (CC1).

The site must communicate:

- HLC: local legal entity, contracting, licensing, workforce, local content, logistics and works support.
- CC1: technical/EPC capacity, engineering, project management, technical personnel, ISO systems, guarantees and financial capacity.

4. Design direction

Primary visual reference: <https://evostel.com/>.

Adopt:

- premium industrial presentation;
- full-screen hero media;
- floating pill navigation;
- large editorial typography;
- generous white space;

- restrained scroll reveals;
- horizontal capability/project cards;
- prominent brochure download;
- minimal contact experience.

Do not copy Evostel's text, brand palette, industries, statistics, media or partner claims.

5. Brand personality

- Institutional
- Technical
- Confident but factual
- Mozambican and locally committed
- Internationally capable through the CC1 consortium
- Premium but not extravagant
- Engineering-led, not startup-like

6. Required languages

- Portuguese: authoritative
- English: faithful translation

Language choice must be visible on desktop and mobile. URLs should be language-aware, preferably /pt/ and /en/, with appropriate hreflang tags.

7. Version 1 scope

Included

- Bilingual homepage
- About HLC
- Areas of Interest
- HLC–CC1 Consortium
- CC1 Technical Capacity
- CC1 Reference Projects
- Commitment to Mozambique / capacity transfer
- Contact page and form
- Company-profile download
- Legal/privacy pages
- Responsive navigation and footer
- Basic analytics only after approval

Excluded unless approved

- News CMS
- Careers portal
- Customer login
- Live chat or chatbot
- Project tender portal
- Supplier registration workflow
- Investor portal
- E-commerce
- Unapproved social-media feeds

- Interactive global project map

8. Success criteria

- A visitor understands HLC's role within 15 seconds.
- A visitor can distinguish HLC from CC1 without ambiguity.
- Every CC1 reference is correctly attributed.
- Portuguese and English content are complete and consistent.
- Mobile pages remain fast on constrained connections.
- Contact submissions are delivered reliably without exposing credentials.
- The website passes the release gates in 07_QA_ACCEPTANCE_CRITERIA.md.

9. Decision framework

- Technical complexity: Low to medium
- Cost: Low to medium
- Primary risk: Reputational/legal misattribution of CC1 experience
- Recommendation: Static-first bilingual website with a minimal content layer and no unnecessary platform complexity
- Why: It maximizes speed, security and performance while meeting the actual institutional objective.

HLC Energies Information Architecture

1. Recommended sitemap

```
`text / ■■■ pt/ ■ ■■■ sobre-a-hlc/ ■ ■■■ areas-de-interesse/ ■ ■■■
consorcio-hlc-cc1/ ■ ■■■ capacidade-tecnica/ ■ ■■■ projectos-de-referencia/ ■ ■ ■■■
vinh-tan-4/ ■ ■■■ compromisso-com-mocambique/ ■ ■■■ contactos/ ■ ■■■ privacidade/ ■
■■■ termos-de-utilizacao/ ■■■ en/ ■■■ about-hlc/ ■■■ areas-of-interest/ ■■■
hlc-cc1-consortium/ ■■■ technical-capacity/ ■■■ reference-projects/ ■ ■■■
vinh-tan-4/ ■■■ commitment-to-mozambique/ ■■■ contact/ ■■■ privacy/ ■■■
terms-of-use/ ``
```

The root / may redirect using a visible language choice or a neutral landing decision. Do not silently force language based only on location.

2. Primary navigation

Portuguese

- Início
- Sobre a HLC
- Áreas de Interesse
- Consórcio HLC–CC1
- Projectos de Referência
- Contactos

English

- Home
- About HLC
- Areas of Interest
- HLC–CC1 Consortium
- Reference Projects
- Contact

Desktop: floating rounded navigation inspired by Evostel.

Mobile: compact logo, language switch and accessible menu button.

3. Homepage sequence

Section 1 — Hero

- Full-screen energy/infrastructure media
- HLC name and approved positioning
- Primary CTA: About HLC
- Secondary CTA: Contact
- No unlabelled CC1 statistics

Section 2 — About HLC

- Large scroll-reveal institutional statement from COPY.md
- Link to the full About page

Section 3 — HLC–CC1 Consortium

- Two-column role comparison

- HLC local responsibilities
- CC1 technical responsibilities
- Consortium-agreement statement

Section 4 — Areas of Interest

Interactive tabs/cards for:

- EPC power plants
- Transmission and distribution lines
- Substations
- Solar IPP projects
- Rural electrification
- Energy-sector civil and industrial works

Section 5 — Consortium Capabilities

Horizontal cards showing only approved functions:

- Local contracting and execution
- Licensing and institutional coordination
- Engineering and EPC
- Project management
- Logistics and works support
- Local content and capacity transfer

Section 6 — CC1 Technical Capacity

- Clearly branded as CC1 information
- Approved CC1 indicators
- Approved ISO certifications
- Mandatory attribution note

Section 7 — CC1 Reference Projects

Horizontal project cards:

- Dakr Tih Hydropower Plants
- Han Kiem 2 Wind Power Plant
- Tay Ninh TTC1 & TTC2 Solar Power Plants
- Nghi Son 2 Thermal Power Plant
- Vinh Tan 4 Thermal Power Plant

Every card must carry the label CC1 Technical Reference Project / Projecto de Referência Técnica da CC1.

Section 8 — Commitment to Mozambique

Five pillars:

- Local employment
- National suppliers
- Legal compliance
- Institutional coordination
- Capacity transfer / Mozambicanisation

Section 9 — Institutional Profile

- Approved company-profile cover or preview

- Download button
- File-size and language label if known at build time

Section 10 — Contact

- Approved address and email
- Short contact form
- No unapproved telephone or social link

Section 11 — Footer

- Registered company name
- Consortium line
- Address and email
- Language selector
- Privacy and terms
- Copyright

4. Page requirements

About HLC

Use only the approved company description, legal data and corporate purpose from COPY .md. Legal identifiers may be hidden until publication approval.

Areas of Interest

Present approved sectors as areas of interest, not completed HLC services or operational assets.

Consortium

Explain the division of responsibilities and the client-facing contract position. Avoid vague partnership language.

Technical Capacity

This page is explicitly about CC1. It must not visually imply the indicators belong to HLC.

Reference Projects

Project cards and detail pages must show source, project facts and CC1 attribution. Do not add status, client, contract value or HLC role unless approved.

Commitment to Mozambique

Use the approved four national-commitment pillars plus capacity-transfer content. Avoid unsupported ESG statistics.

Contact

Form fields:

- Name / Nome
- Organization / Organização
- Email / E-mail
- Telephone / Telefone (optional)
- Subject / Assunto
- Message / Mensagem
- Consent checkbox linked to privacy notice

5. Content ownership labels

Use visible labels where ambiguity is possible:

- HLC Mozambique
- CC1 – Technical Partner
- CC1 Technical Reference Project
- Source: HLC Institutional Profile
- Source: CC1 project page for Vinh Tan 4

6. Initial content strategy

Do not launch empty News, Careers, Partners or Customers pages. Add them only when approved content exists. A smaller complete website is better than a larger site with placeholder claims.

HLC Energies Design Direction

1. Reference

Primary reference: <https://evostel.com/>.

The implementation must be inspired by Evostel's visual language without reproducing its copyrighted assets, code, exact layout, copy, palette or brand identity.

2. Design objective

Create a premium industrial-energy experience that communicates:

- Mozambican legal and operational presence;
- serious engineering and infrastructure intent;
- local execution through HLC;
- international technical capacity through CC1;
- long-term commitment to Mozambique.

3. Visual principles

- Full-bleed industrial media
- Large, concise typography
- High contrast
- Generous white space
- Rounded navigation and buttons
- Controlled blue/gold identity
- Minimal decorative graphics
- Clear source and attribution labels
- Strong mobile composition

4. Proposed design tokens

These values are implementation proposals derived from the approved profile's visual direction. Confirm against official brand files when available.

```
`css :root { --hlc-blue-900: #123f63; --hlc-blue-700: #20557f; --hlc-blue-500: #3478a8; --hlc-gold-500: #c9a23a; --hlc-ink: #182630; --hlc-grey-700: #56636d; --hlc-grey-200: #e7edf1; --hlc-grey-100: #f5f7f8; --hlc-white: #ffffff; --radius-pill: 999px; --radius-card: 18px; --shadow-nav: 0 12px 34px rgba(18, 63, 99, 0.14); } `
```

Do not use Evostel's turquoise/purple palette as HLC's brand.

5. Typography

Preferred direction: neutral geometric sans-serif with strong multilingual support.

Recommended stack:

```
`css font-family: "Inter", "Helvetica Neue", Arial, sans-serif; `
```

Alternative: Manrope for display headings and Inter for body text.

Requirements:

- Portuguese diacritics must render correctly.
- Heading weight: 500–650, not excessively bold.

- Body text: 16–18 px desktop, at least 16 px mobile.
- Maximum readable line length: approximately 70 characters.
- Avoid all-caps paragraphs.

6. Component direction

Floating navigation

- White or translucent surface over hero
- Rounded pill shape
- Active item in HLC blue
- Visible focus ring
- Collapses to accessible mobile menu
- Language selector remains visible

Hero

- 85–100 viewport-height section
- Video or high-resolution still
- Dark overlay for text contrast
- HLC logo top-left
- One headline, one short approved description, two CTAs
- No unlabelled statistics

Section labels

Small bullet plus short label, following Evostel's editorial sections. Example: • Sobre a HLC.

Capability tabs

- Horizontal desktop tabs
- Accordion or swipe-safe cards on mobile
- Keyboard operable
- Visible selected state
- No content hidden from search engines or no-JavaScript users

Consortium comparison

Two-column desktop, stacked mobile. HLC and CC1 must have distinct labels and equal visual clarity.

Project cards

Each card includes:

- approved image or neutral placeholder;
- project name;
- location;
- capacity and period only when sourced;
- technology tag;
- prominent CC1 attribution;
- link to project detail where available.

Brochure block

Use Evostel's split-panel approach:

- blue copy panel;
- approved profile cover/project image;

- clear download action;
- no automatic download.

Contact form

Minimal fields, large controls, inline validation and clear success/error state.

7. Motion system

Allowed:

- subtle fade/translate reveals;
- text-line reveal;
- restrained card transitions;
- slow hero-video movement;
- progress indicator for horizontal project carousel.

Not allowed:

- scroll-jacking;
- content that remains invisible until animation runs;
- long page-lock transitions;
- autoplay audio;
- flashing effects;
- parallax that harms readability;
- animation required to understand content.

Respect prefers-reduced-motion and provide no-motion fallbacks.

8. Media direction

Preferred imagery:

- power plants;
- transmission and distribution infrastructure;
- substations;
- solar, wind and hydropower;
- engineers and site teams;
- Mozambican infrastructure context where approved.

Controls:

- Do not use CC1 project photographs without permission.
- Do not use photographs that imply HLC executed an unapproved project.
- Avoid generic stock images with incorrect geography or unsafe engineering practices.
- Add accurate alt text and source/credit metadata.

9. Responsive behaviour

Breakpoints should be content-driven. Minimum validation widths:

- 320 px
- 375 px
- 768 px
- 1024 px
- 1440 px

On mobile:

- hero text must remain readable;
- no horizontal overflow;
- carousels must also expose accessible next/previous controls;
- tap targets at least 44 × 44 px;
- floating navigation must not cover content.

10. Design risks and controls

| Risk | Control | |---|---| | Evostel-like blank sections while scripts load | Render content server-side/static and animate progressively | | CC1 statistics look like HLC statistics | Separate section, labels and mandatory attribution | | Heavy video harms Mozambique mobile users | Compressed formats, poster image, reduced-motion and data-saving fallbacks | | Premium design becomes vague | Use factual copy from COPY.md and visible section headings | | Copyright risk | Use Evostel only as inspiration; create original components and assets |

HLC Energies Functional and Technical Requirements

1. Recommended architecture

Use a static-first architecture with bilingual routes and minimal server functionality.

Recommended options:

1. Astro with static output — preferred for performance and low JavaScript.
2. Next.js with static generation — acceptable if the implementation team already standardizes on it.

Do not introduce a database or headless CMS in version 1 unless a named content owner and update workflow are approved.

2. Core functional requirements

Bilingual routing

- Portuguese and English pages
- Visible language switcher
- Equivalent-page switching where translations exist
- Localized navigation, metadata and forms
- Correct lang attributes and hreflang

Navigation

- Floating desktop navigation inspired by Evostel
- Accessible mobile menu
- Skip-to-content link
- Current-page state
- Keyboard and screen-reader support

Company-profile download

- Approved PDF hosted on the company-controlled domain
- File name, language and type visible
- Download event may be measured only after analytics approval

Reference projects

- Data-driven project cards
- Explicit owner/experienceEntity: CC1 field in content model
- No project can render without attribution
- Optional detail pages

Suggested project schema:

```
``ts type ReferenceProject = { slug: string; locale: "pt" | "en"; name: string; entity: "CC1"; attribution: string; location?: string; executionPeriod?: string; capacity?: string; technology?: string; sourceLabel: string; sourceUrl?: string; image?: ApprovedAsset; }; ``
```

Contact form

- Server-side validation
- Email delivery to an approved company mailbox

- No credentials in client code
- Honeypot plus rate limiting
- Optional CAPTCHA only if abuse requires it
- Clear success and failure messages
- Consent checkbox linked to privacy notice
- Do not log full message bodies in analytics

Legal pages

- Privacy notice
- Terms of use
- Cookie notice only if non-essential cookies are used

3. Content requirements

- Source content from COPY .md
- Store PT and EN content separately or in typed locale files
- Prevent build if required attribution fields are missing
- No placeholder lorem ipsum in staging approval build
- No empty public sections

4. Performance requirements

Targets measured on production-like mobile conditions:

- Lighthouse Performance: at least 90
- Lighthouse Accessibility: at least 95
- Lighthouse Best Practices: at least 95
- Lighthouse SEO: at least 95
- Largest Contentful Paint: under 2.5 seconds
- Cumulative Layout Shift: below 0.1
- Interaction to Next Paint: below 200 ms where measurable

Implementation controls:

- Static HTML for primary content
- Responsive AVIF/WebP images with fallback
- Lazy-load below-the-fold media
- Self-host or carefully preload only required fonts
- Hero-video poster image
- Avoid large animation libraries where CSS/native APIs suffice
- Bundle analysis before release

5. Hero-video requirements

- Muted, looped and plays inline
- No audio track
- Poster image always available
- Respect reduced-motion preference
- Do not autoplay on data-saving/reduced-motion contexts
- Desktop and mobile crops
- Keep compressed file sizes appropriate for mobile delivery

6. Hosting and deployment

Preferred:

- Company-controlled repository
- Staging and production environments
- Protected production branch
- Automated build and deployment
- HTTPS and automatic certificate renewal
- CDN caching
- Rollback capability

Acceptable hosts include a company-approved static host or controlled VPS deployment. Domain, DNS, repository, analytics and form-service accounts must use company ownership, 2FA and role-based access.

7. Environment variables

Examples:

```
``text CONTACT_TO_EMAIL= CONTACT_FROM_EMAIL= SMTP_HOST= SMTP_PORT= SMTP_USER=
SMTP_PASSWORD= PUBLIC_SITE_URL=https://hlcenergies.com ANALYTICS_ID= ``
```

Commit only `.env.example`, never real credentials.

8. Testing requirements

Automated

- Unit tests for locale helpers and project attribution validation
- Component tests for navigation, tabs and forms
- End-to-end tests for PT/EN routing, form submission and downloads
- Link checker
- HTML validation
- Accessibility scan using axe or equivalent
- Lighthouse CI

Manual

- iOS Safari
- Android Chrome
- Desktop Chrome, Safari, Firefox and Edge
- Keyboard-only navigation
- Screen-reader smoke test
- Slow network and JavaScript-failure check

9. Content validation rules

Build should fail when:

- a CC1 project lacks attribution;
- a project uses HLC as executing entity without explicit approval;
- a locale page lacks its counterpart without being marked intentionally untranslated;
- a public asset lacks alt text or decorative status;
- contact details differ from the approved content source.

10. Version 1 exclusions

- Database
- User authentication
- Chatbot
- Payment processing
- Customer portal
- Tender upload portal
- Complex CMS
- Social-feed integrations
- Third-party trackers not explicitly approved

11. Delivery artifacts

The implementation team must provide:

- source repository;
- README and setup instructions;
- `.env.example`;
- design tokens;
- content files;
- automated tests;
- staging URL;
- production deployment instructions;
- DNS requirements;
- backup and rollback procedure;
- final asset licence register.

HLC Energies SEO, Accessibility, Security and Privacy Requirements

1. SEO objective

Make HLC discoverable for its approved identity and areas of interest in Mozambique without using unsupported leadership, ownership or performance claims.

2. Approved keyword themes

Portuguese

- HLC Energias Renováveis e Infraestruturas
- energia e infra-estruturas em Moçambique
- projectos de energia em Moçambique
- centrais eléctricas EPC
- linhas de transporte e distribuição
- subestações eléctricas
- projectos solares IPP
- electrificação rural
- Consórcio HLC–CC1

English

- HLC Renewable Energies and Infrastructures
- energy and infrastructure in Mozambique
- energy projects in Mozambique
- EPC power plants
- transmission and distribution lines
- electrical substations
- solar IPP projects
- rural electrification
- HLC–CC1 Consortium

Do not target unsupported phrases such as “leading energy company in Mozambique” or “largest EPC contractor in Africa”.

3. Metadata

Use the safe metadata in COPY .md. Each page requires:

- unique title;
- unique meta description;
- canonical URL;
- PT/EN href lang pairs;
- Open Graph title, description and approved image;
- social-card metadata only when approved imagery exists.

4. Structured data

Recommended:

- Organization
- WebSite
- BreadcrumbList
- ContactPoint only with approved contact data

Do not use award, rating, founder, revenue or project ownership schema unless specifically approved and attributable.

5. Indexing controls

- Production pages indexable
- Staging protected and noindex
- XML sitemap per locale or combined with alternates
- robots.txt
- Correct 404 page
- Redirect map for any changed URLs

6. Accessibility standard

Target WCAG 2.2 AA.

Required:

- semantic headings in logical order;
- keyboard operation for menus, tabs, carousels and forms;
- visible focus indicators;
- skip-to-content link;
- minimum 4.5:1 body-text contrast;
- alt text for informative imagery;
- empty alt text for decorative imagery;
- captions/transcript if video communicates information;
- reduced-motion support;
- form labels, instructions and error association;
- status messages announced to assistive technology;
- touch targets at least 44 × 44 px;
- no information conveyed by colour alone;
- language attributes for PT and EN.

7. Security requirements

- HTTPS only
- HSTS after deployment validation
- Content Security Policy
- X-Content-Type-Options: nosniff
- Referrer-Policy
- restrictive Permissions-Policy
- secure form endpoint
- server-side validation and sanitisation
- rate limiting and anti-spam controls
- no credentials in source control
- dependency and secret scanning in CI

- least-privilege deployment credentials
- company accounts with 2FA
- production access logging without storing sensitive message content

8. Privacy requirements

The contact form may collect:

- name;
- organization;
- email;
- optional telephone;
- subject;
- message;
- consent confirmation;
- technical anti-abuse data where legally permitted.

Controls:

- collect only necessary fields;
- state purpose and retention period in privacy notice;
- restrict mailbox access;
- do not send contact data to public AI services;
- do not include PII in analytics events;
- establish deletion/retention procedure;
- identify the approved data controller before launch.

9. Cookies and analytics

Preferred version 1 approach: privacy-conscious, minimal analytics.

- Essential cookies do not require a marketing banner in many regimes, subject to legal review.
- Non-essential analytics/marketing cookies require consent where applicable.
- Do not add Meta Pixel, advertising trackers or session replay without written approval.
- If analytics is approved, mask or avoid IP collection where supported and document retention.

10. Contact-form email security

- Use an approved company mailbox and service account.
- Enforce SPF, DKIM and DMARC for the sending domain.
- Do not expose SMTP credentials.
- Include a clear reply-to address but prevent header injection.
- Use plain-text and HTML templates with escaped user content.

11. Legal publication checks

Human approval is required before publishing:

- NUIT and legal-entity number;
- legal representative name;
- CC1 financial figures;
- CC1 certifications;
- CC1 logos and project imagery;

- partner/customer logos;
- privacy notice and retention terms;
- analytics and cookie configuration.

HLC Energies Asset and Approval Register

1. Purpose

Track every asset and publication-sensitive item required for hlcenergies.com. An asset is not approved merely because it appears in a supplied PDF or external website.

2. Required brand assets

| Asset | Required format | Status | Approval owner | |---|---|---|---| | HLC primary logo | SVG + transparent PNG | Required | HLC management | | HLC reversed/white logo | SVG + PNG | Required | HLC management | | HLC favicon/app icon | SVG/PNG | Required | HLC management | | Official colour values | HEX/RGB/CMYK reference | Confirm | HLC management | | Official typeface/licence | Font files or approved substitute | Confirm | HLC management | | CC1 logo | SVG/PNG | Permission required | CC1/HLC management |

3. Required website media

| Asset | Intended use | Minimum requirement | Control | |---|---|---|---| | Hero video | Homepage hero | Desktop/mobile crop, muted, compressed, poster | Must not imply an unapproved HLC project | | Hero poster | Video fallback | 2400 px desktop + mobile crop | Rights documented | | About HLC image | Institutional section | Mozambique/HLC-relevant | No false project implication | | Consortium visual | HLC–CC1 section | Original diagram or approved logos | Roles must match profile | | Area-of-interest images | Sector cards | Six approved images | Illustrative label if not HLC work | | Project images | CC1 reference cards | Optimized originals | CC1 permission and attribution | | Mozambique commitment images | Local-content section | Authentic local context | Consent and rights documented | | Profile cover | Brochure block | Approved cover image | Use latest approved profile | | Social-share image | Metadata | 1200 × 630 px | Approved brand treatment |

4. Approved content sources

| Source | Use | Status | |---|---|---| | Company Profile.pdf | Primary HLC factual source | Approved by user | | COPY.md | Website copy source of truth | Prepared; final publication approval required | | CC1 Vinh Tan 4 page | Vinh Tan 4 facts | Supplied supplementary source | | CC1-COMPANY PROFILE EN.pdf | Verification/reference only | Not the primary HLC profile | | Evostel website | Design inspiration only | No asset/code copying |

5. Contact and legal data

| Item | Current source value | Publication status | |---|---|---| | Registered name | HLC Energias Renováveis e Infraestruturas, LDA | Confirm final styling | | NUIT | 402198583 | Approval required before publication | | Legal entity number | 105074676 | Approval required before publication | | Legal representative | Ngoc Ha Nguyen | Approval required before publication | | Address | Maputo/Kamavota/Costa do Sol/Rua de Micaia/Q. 56/N.º 115 | Confirm preferred public format | | Email | info.moz@hlmic.com | Confirm mailbox operation | | Telephone | Not provided | Do not publish | | Domain | hlcenergies.com | Confirm DNS/control |

6. CC1 publication-sensitive items

Separate approval is required for:

- CC1 logo;
- project photographs;
- financial indicators;
- ISO certification claims or certificate images;
- customer and partner logos;
- detailed project descriptions;
- use of the words “guarantees” and “financial capacity” in public marketing context;

- reproduction of content from the CC1 website.

7. Asset naming convention

```
``text hlc-logo-primary.svg hlc-logo-reversed.svg hero-energy-mozambique-desktop.avif
hero-energy-mozambique-mobile.avif hero-energy-mozambique.mp4
project-cc1-vinh-tan-4-01.avif project-cc1-dakr-tih-01.avif profile-hlc-pt-2026.pdf
og-hlc-home-pt.jpg ``
```

8. Asset metadata record

Every public asset should record:

- file name;
- owner/source;
- licence or written permission;
- photographer/credit if required;
- project depicted;
- whether it is HLC, CC1 or illustrative;
- alt text in PT and EN;
- crop variants;
- approval date and approver.

9. Pre-build blockers

The build may use clearly marked placeholders, but production publication is blocked until:

- official HLC logo files are available;
- hero media rights are confirmed;
- CC1 image/logo permissions are confirmed or those assets are omitted;
- the contact mailbox is tested;
- company-profile download version is approved;
- legal/privacy text is approved.

HLC Energies QA and Acceptance Criteria

1. Release rule

The website may move from staging to production only when all critical checks pass and all publication blockers have named owners and approvals.

2. Content accuracy

- ☐ Company name matches COPY .md exactly.
- ☐ NUIT, legal number, address, representative and email match the source.
- ☐ No telephone number is invented.
- ☐ HLC is not described as having completed projects in Mozambique.
- ☐ HLC areas are presented as approved areas of interest/capability.
- ☐ Every CC1 project is visibly attributed to CC1.
- ☐ CC1 indicators and certifications are not attributed to HLC.
- ☐ Vinh Tan 4 displays only sourced facts: Tuy Phong, Binh Thuan; 2014–2017; 1,200 MW.
- ☐ The Dakr Tih output does not receive an inferred unit.
- ☐ Nghi Son 2 does not receive an unsourced capacity.
- ☐ PT and EN pages communicate equivalent facts.
- ☐ No lorem ipsum or draft placeholder is public.

3. Design fidelity

- ☐ Premium, industrial, Evostel-inspired direction is evident.
- ☐ HLC blue/gold identity replaces Evostel colours.
- ☐ Floating navigation works across breakpoints.
- ☐ Hero is readable with video, poster and reduced-motion modes.
- ☐ White space is intentional and does not resemble unloaded content.
- ☐ Project cards show attribution without requiring hover.
- ☐ HLC and CC1 roles remain visually distinct.
- ☐ No Evostel code, images or text has been copied.

4. Functional checks

- ☐ PT and EN routes load correctly.
- ☐ Language switch preserves equivalent page context.
- ☐ Mobile menu opens, traps focus appropriately and closes.
- ☐ Tabs and carousels work by mouse, touch and keyboard.
- ☐ Company-profile download works.
- ☐ Contact form validates required fields.
- ☐ Contact form delivers a test message to the approved mailbox.
- ☐ Success and error messages are visible and announced.
- ☐ Spam controls reject automated submissions without blocking normal users.
- ☐ 404 and error states are branded and helpful.

5. Responsive checks

Validate at:

- ☐ 320 px
- ☐ 375 px
- ☐ 768 px
- ☐ 1024 px
- ☐ 1440 px

At each size:

- ☐ no horizontal overflow;
- ☐ navigation does not obscure content;
- ☐ headings do not clip;
- ☐ project cards remain readable;
- ☐ forms are usable;
- ☐ buttons/tap targets are at least 44 × 44 px.

6. Accessibility checks

- ☐ WCAG 2.2 AA automated scan has no critical violations.
- ☐ Keyboard-only completion is possible.
- ☐ Focus state is clearly visible.
- ☐ Skip link works.
- ☐ Heading hierarchy is logical.
- ☐ Images have appropriate alt text.
- ☐ Colour contrast passes.
- ☐ Reduced-motion mode works.
- ☐ Screen-reader smoke test completed for navigation, project cards and contact form.
- ☐ Form errors are programmatically associated.

7. Performance checks

Production-like mobile Lighthouse targets:

- ☐ Performance ≥ 90
- ☐ Accessibility ≥ 95
- ☐ Best Practices ≥ 95
- ☐ SEO ≥ 95
- ☐ LCP < 2.5 s
- ☐ CLS < 0.1
- ☐ INP < 200 ms where measurable

Also verify:

- ☐ hero video has poster and compressed variants;
- ☐ below-fold images lazy-load;
- ☐ no unnecessary animation framework;
- ☐ no excessive third-party scripts;
- ☐ pages remain meaningful when JavaScript fails.

8. SEO checks

- ☐ Unique titles and descriptions
- ☐ Canonical URLs
- ☐ PT/EN hreflang

- ☐ Sitemap and robots file
- ☐ Staging is noindex
- ☐ Open Graph data
- ☐ Organization schema uses only approved facts
- ☐ No unsupported “leading/largest/best” keywords
- ☐ Broken-link scan passes

9. Security and privacy checks

- ☐ HTTPS works and HTTP redirects.
- ☐ Security headers are present.
- ☐ No secrets in repository or browser bundle.
- ☐ Dependencies scanned.
- ☐ Contact endpoint validates and rate-limits.
- ☐ User content is escaped in emails and logs.
- ☐ Privacy notice is linked from form and footer.
- ☐ Analytics/cookies match approved consent design.
- ☐ Company accounts use 2FA and least privilege.

10. Browser/device matrix

- ☐ Safari on current macOS
- ☐ Chrome on current macOS/Windows
- ☐ Firefox current
- ☐ Edge current
- ☐ Safari on iPhone
- ☐ Chrome on Android
- ☐ Slow mobile network profile

11. Production handover

- ☐ Repository transferred to company ownership.
- ☐ Domain and DNS controlled by company account.
- ☐ Staging and production URLs documented.
- ☐ Deployment and rollback tested.
- ☐ Backup procedure documented.
- ☐ Environment-variable owners documented.
- ☐ Asset permissions archived.
- ☐ Final human content approval recorded.

HLC Energies Website Implementation Plan

For Hermes: Use the subagent-driven-development skill to implement this plan task-by-task after a repository and stack are approved.

Goal: Build and deploy a fast, bilingual, Evostel-inspired institutional website for `hlcenergies.com` using the controlled HLC copy pack.

Architecture: Static-first bilingual site with typed content, progressive enhancement and a minimal secure server endpoint for the contact form. Primary content must render without client-side JavaScript. CC1 project data must require explicit attribution fields.

Preferred stack: Astro, TypeScript, CSS custom properties, Playwright, axe, Lighthouse CI, approved email/API service.

Phase 0 — Decisions and access

Task 1: Confirm build inputs

- Confirm official logo and brand assets.
- Confirm hero/project image rights.
- Confirm publication of legal details and CC1 indicators.
- Confirm company-profile download.
- Confirm contact-form destination mailbox.
- Confirm repository, hosting, DNS and analytics ownership.

Acceptance: No production-critical asset or approval owner is unknown.

Task 2: Create company-controlled repository

- Initialize repository.
- Protect production branch.
- Add maintainers and 2FA requirements.
- Add issue templates for content, design and defects.

Acceptance: Repository is accessible through company accounts and production branch is protected.

Phase 1 — Foundation

Task 3: Scaffold the project

Suggested files:

```
``text src/ components/ content/ pt/ en/ layouts/ pages/ pt/ en/ styles/ public/ assets/ tests/ ``
```

- Configure TypeScript strict mode.
- Configure formatting/linting.
- Add `.env.example`.
- Add build, test and preview commands.

Verification: Clean install, build and test commands succeed.

Task 4: Implement design tokens and base layout

- Add HLC colours, typography, spacing, radii and shadows.
- Add global focus, reduced-motion and responsive rules.

- Add semantic page shell, skip link and footer.

Verification: Base page passes initial accessibility scan.

Task 5: Implement bilingual routing

- Add /pt/ and /en/ routes.
- Add locale-aware navigation and language switch.
- Add document language, canonical and hreflang helpers.

Verification: Automated tests confirm equivalent-route switching.

Phase 2 — Content model and controls

Task 6: Import approved copy

- Convert COPY.md sections into controlled locale content files.
- Preserve Portuguese as authoritative.
- Add source comments/metadata.

Verification: No content claim exists without a source field.

Task 7: Create CC1 reference-project schema

- Require entity CC1.
- Require attribution and source label.
- Make optional facts truly optional.
- Reject an HLC executing-entity value in version 1.

Verification: Unit test fails on missing or incorrect attribution, then passes with valid data.

Phase 3 — Components

Task 8: Build floating navigation

- Desktop pill navigation.
- Mobile menu.
- Language switch.
- Current-page state.
- Keyboard/focus behavior.

Task 9: Build hero

- Responsive media and poster.
- Approved copy and CTAs.
- Reduced-motion/data-saving fallback.
- No unlabelled statistics.

Task 10: Build About and section-label system

- Large editorial text.
- Progressive reveal that never hides fallback content.
- Reusable section label.

Task 11: Build Consortium comparison

- HLC and CC1 columns.
- Correct role lists.
- Mandatory agreement statement.

Task 12: Build Areas of Interest

- Accessible tabs on desktop.
- Accordion/cards on mobile.
- Six approved areas.

Task 13: Build capability and project carousels

- Touch, mouse and keyboard controls.
- Visible progress and buttons.
- No auto-advance required.
- Attribution always visible on project cards.

Task 14: Build commitment and brochure sections

- National-commitment pillars.
- Capacity-transfer statements.
- Approved profile download.

Task 15: Build contact and legal pages

- Accessible form.
- Privacy consent.
- Approved contact details.
- Terms/privacy templates pending legal approval.

Phase 4 — Integration

Task 16: Implement secure contact endpoint

- Server validation and sanitisation.
- Rate limiting and honeypot.
- Approved mail service credentials via environment variables.
- Success/failure monitoring without PII analytics.

Verification: Valid staging submission reaches the approved mailbox; malicious/invalid payloads are rejected.

Task 17: Add SEO and structured data

- Titles, descriptions, canonicals and hreflang.
- Sitemap, robots, Open Graph.
- Approved Organization schema.

Task 18: Optimize media and performance

- Responsive AVIF/WebP.
- Hero-video variants and poster.
- Font strategy.
- JavaScript/bundle review.

Phase 5 — Quality gates

Task 19: Automated test suite

- Unit tests
- Component tests
- Playwright PT/EN flows
- Link checker

- axe scan
- Lighthouse CI
- Attribution validation

Task 20: Manual QA

Execute every item in 07_QA_ACCEPTANCE_CRITERIA.md and record evidence.

Task 21: Content/legal approval

Provide staging to named approvers. Resolve all factual, translation, attribution, asset and legal comments.

Phase 6 — Deployment

Task 22: Production deployment

- Configure DNS and HTTPS.
- Configure security headers.
- Remove staging noindex only on production.
- Run post-deploy smoke tests.

Task 23: Handover

- Deliver repository, accounts, deployment procedure, rollback, asset register and maintenance instructions.
- Confirm company ownership and 2FA.

Definition of done

- All critical QA checks pass.
- All public claims are grounded in COPY.md.
- CC1 references are unambiguous.
- PT and EN are complete.
- Contact delivery is verified.
- Production ownership rests with company-controlled accounts.

HLC Energies Website — Master Agent Prompt

Copy the prompt below into the website-building agent together with this documentation folder.

Agent instruction

You are building the official institutional website for HLC Energias Renováveis e Infraestruturas, LDA at hlcenergies.com.

Business objective

Create a premium, bilingual institutional website that explains HLC's Mozambican role, the HLC–CC1 Consortium model, approved areas of interest, CC1's separately attributed technical reference experience and HLC's commitment to Mozambique.

Required inputs

Read these files in order before coding:

1. 00_README.md
2. 01_WEBSITE_BRIEF.md
3. 02_INFORMATION_ARCHITECTURE.md
4. 03_DESIGN_DIRECTION.md
5. 04_FUNCTIONAL_TECHNICAL_REQUIREMENTS.md
6. 05_SEO_ACCESSIBILITY_SECURITY.md
7. 06_ASSET_APPROVAL_REGISTER.md
8. 07_QA_ACCEPTANCE_CRITERIA.md
9. 08_IMPLEMENTATION_PLAN.md
10. COPY.md

Treat COPY.md as the factual source of truth.

Design direction

Use <https://evostel.com/> only as visual and interaction inspiration:

- full-screen industrial hero;
- floating pill navigation;
- large editorial typography;
- generous white space;
- controlled scroll reveals;
- interactive industry/capability cards;
- horizontal project presentation;
- prominent brochure block;
- minimal contact experience.

Create an original implementation. Do not copy Evostel's code, media, text, palette, exact layout or proprietary assets.

Use HLC blue, white and gold. The site must feel institutional, technical, premium and Mozambique-focused.

Non-negotiable factual controls

- HLC and CC1 are separate entities.
- Never state or imply that HLC executed or invested in a CC1 project.
- Every CC1 project must visibly say it is a CC1 technical reference.
- Never transfer CC1's revenue, assets, ISO certifications, project count, clients or years of experience to HLC.
- Do not claim completed HLC projects in Mozambique.
- Do not invent services, partners, customers, telephone numbers, social links, offices, statistics or project facts.
- Do not add a capacity for Nghi Son 2 from outside the approved pack.
- Do not add a unit to the Dakr Tih “635 million per year” statement.
- Vinh Tan 4 may use only: Tuy Phong, Binh Thuan Province; 2014–2017; 1,200 MW; CC1 attribution.
- Portuguese is authoritative. English must be a faithful translation.
- Do not publish unapproved legal identifiers or restricted assets in production.

Technical direction

Prefer Astro with static output and TypeScript unless the repository standards specify otherwise.

Primary content must render without client-side JavaScript. Use progressive enhancement for motion and interactions. Avoid scroll-jacking and heavy animation frameworks.

Create:

- /pt/ and /en/ routes;
- accessible navigation and language switching;
- responsive hero with poster/reduced-motion fallback;
- About HLC section;
- HLC–CC1 role comparison;
- areas-of-interest tabs/cards;
- consortium-capability cards;
- separately labelled CC1 technical-capacity section;
- CC1 reference-project cards and Vinh Tan 4 page;
- commitment-to-Mozambique section;
- approved company-profile download;
- contact form and legal pages;
- SEO metadata, sitemap, robots and approved structured data.

Content model control

Reference-project data must require:

```
``ts entity: "CC1" attribution: string sourceLabel: string ``
```

The build or tests must fail when a reference project lacks CC1 attribution.

Quality targets

- Lighthouse Performance ≥ 90
- Accessibility ≥ 95
- Best Practices ≥ 95
- SEO ≥ 95
- WCAG 2.2 AA
- LCP < 2.5 s
- CLS < 0.1
- No critical axe violations

- No broken links
- No horizontal overflow at 320 px

Required workflow

1. Inspect all documentation and existing repository files.
2. Produce an implementation plan with exact paths before modifying code.
3. Identify missing assets/approvals and use labelled placeholders only on staging.
4. Implement in small, testable tasks.
5. Add attribution validation tests before project UI implementation.
6. Build and run the complete test suite.
7. Serve the staging build and visually inspect desktop and mobile.
8. Execute 07_QA_ACCEPTANCE_CRITERIA.md.
9. Report actual commands, test results, Lighthouse results, unresolved blockers and artifact paths.

Prohibited shortcuts

- Do not return only mockups or descriptions.
- Do not fabricate successful form delivery.
- Do not claim deployment without a verifiable URL and test.
- Do not replace missing assets with unlicensed downloads.
- Do not remove attribution to improve visual simplicity.
- Do not launch empty News, Partners, Customers or Careers sections.

Definition of done

The site is complete only when it builds successfully, passes the critical acceptance criteria, displays all approved PT/EN content, keeps HLC and CC1 attribution unambiguous, and has a verified staging deployment.

HLC Energies Website — Approved Copy & Source-of-Truth Pack

Domain: hlcenergies.com

Company: HLC Energias Renováveis e Infraestruturas, LDA

Market: República de Moçambique

Document purpose: Controlled input for website design, development and content agents

Prepared: 16 July 2026

Status: Draft website copy grounded in approved sources; final publication remains subject to company approval.

1. Mandatory instructions for website agents

1. Treat this document as the website's content source of truth.
2. Do not invent services, projects, offices, partners, certifications, statistics, telephone numbers, social-media accounts or commercial claims.
3. HLC and CC1 are separate entities with distinct roles.
4. Never state or imply that HLC executed or invested in a CC1 reference project.
5. Every CC1 project must be labelled as a project executed or invested in by CC1, the technical partner of the HLC–CC1 Consortium.
6. The Vinh Tan 4 project must be labelled as a CC1 reference project sourced from the CC1 website. It is supplementary information and is not presented as an HLC project.
7. Do not transfer CC1's financial indicators, ISO certifications, project portfolio or years of experience to HLC.
8. Do not claim that HLC has completed projects in Mozambique. The approved company profile does not make that claim.
9. Do not use unapproved superlatives such as “leading”, “largest”, “best”, “world-class” or “number one” for HLC.
10. Portuguese is the authoritative website-copy language in this pack. The English copy is a faithful working translation and introduces no new company claims.
11. Preserve the company name exactly: HLC Energias Renováveis e Infraestruturas, LDA.
12. Preserve the consortium partner name exactly: Construction Corporation No. 1 – JSC (CC1).

2. Approved sources and precedence

Primary approved source

File: Company Profile.pdf

Document title: Perfil Institucional — HLC Energias Renováveis e Infraestruturas, LDA

Coverage: HLC identity, legal information, HLC–CC1 Consortium, roles, CC1 capability presented in the HLC profile, reference projects, capacity transfer, commitment to Mozambique, areas of interest and contact information.

Approved supplementary web source

Page: Vinh Tan 4 Thermal Power Plant — CC1

Provided URL: <http://cc1.vn/en/project/nha-may-nhiet-dien-vinh-tan-4>

Canonical URL reached: <https://www.cc1.vn/en/project/nha-may-nhiet-dien-vinh-tan-4>

Facts harvested on 16 July 2026:

- Project: Vinh Tan 4 Thermal Power Plant
- Location: Tuy Phong, Binh Thuan province
- Execution time: 2014–2017

- Scale: Capacity 1,200 MW

Source precedence

1. HLC Company Profile.pdf
2. The supplied CC1 Vinh Tan 4 project page, only for that project
3. No other source may be used by an agent without explicit approval

4.1 Hero

HLC Energias Renováveis e Infraestruturas, LDA

Energia e infra-estruturas em Moçambique

A HLC Moçambique é uma sociedade constituída ao abrigo da lei moçambicana, membro do Grupo HLC (Vietname).

A sociedade foi constituída para servir como entidade moçambicana de contratação e de execução para os projectos de energia, infra-estruturas e construção do Grupo e dos seus parceiros técnicos em Moçambique.

Acção principal: Conheça a HLC

Acção secundária: Contactos

Source: HLC Company Profile, page 2. The heading and action labels are website navigation copy; the company statements preserve the approved meaning.

4.2 Resumo institucional

Sobre a HLC

A HLC Energias Renováveis e Infraestruturas, LDA é uma sociedade constituída ao abrigo da lei moçambicana e membro do Grupo HLC (Vietname).

A entidade local assegura o enquadramento jurídico, as licenças, a mão-de-obra e o conteúdo local. O parceiro técnico do Consórcio assegura a experiência, a engenharia, a capacidade de execução e as garantias.

Source: HLC Company Profile, page 2.

4.3 Consórcio

O Consórcio HLC–CC1

Para projectos de energia e infra-estruturas em Moçambique, a HLC Moçambique opera em regime de Consórcio contratual com a Construction Corporation No. 1 – JSC (CC1).

Perante o cliente, a HLC Moçambique é signatária dos contratos em Moçambique. A CC1 assegura o suporte técnico e as garantias nos termos do Acordo de Consórcio.

Source: HLC Company Profile, page 3.

4.4 Áreas de interesse

Áreas de interesse

O Consórcio HLC–CC1 foca a sua actuação nos seguintes segmentos do sector energético e de infra-estruturas em Moçambique:

- Centrais eléctricas EPC: térmicas, hídricas e renováveis
- Linhas de transporte e distribuição
- Subestações
- Projectos solares IPP: incluindo soluções de média escala ligadas à rede de 33 kV
- Electrificação rural: mini-redes e sistemas isolados
- Obras civis e industriais associadas ao sector energético: construção civil de grande escala no âmbito de projectos de energia e infra-estruturas

A cobertura sectorial do Consórcio combina a experiência da CC1 em projectos de energia de grande escala com a presença local da HLC Moçambique, permitindo actuar desde centrais de produção até electrificação rural.

Source: HLC Company Profile, page 11.

4.5 Compromisso nacional

Compromisso com Moçambique

A HLC Energias Renováveis e Infraestruturas, LDA assume um compromisso de longo prazo com o desenvolvimento do sector energético e de infra-estruturas de Moçambique, assente nos seguintes pilares:

Emprego local

Prioridade à contratação e formação de trabalhadores moçambicanos em todas as fases dos projectos.

Fornecedores nacionais

Aquisição preferencial de bens e serviços a fornecedores nacionais e provinciais.

Conformidade legal

Integral cumprimento da legislação moçambicana aplicável ao sector eléctrico e à construção.

Articulação institucional

Articulação permanente com as autoridades nacionais e provinciais.

Conteúdo local como pilar estratégico de todas as operações do Consórcio.

Progressiva capacitação de quadros moçambicanos para autonomia operacional.

4.6 Projectos de referência

Experiência técnica de referência da CC1

As referências apresentadas nesta secção constituem experiência da Construction Corporation No. 1 – JSC (CC1), parceiro técnico do Consórcio HLC–CC1. Não são projectos executados pela HLC.

- Usinas Hidrelétricas de Dakr Tih
- Usina Eólica de Han Kiem 2
- Usinas Solares de Tay Ninh TTC1 & TTC2
- Usina Termelétrica de Nghi Son 2
- Central Termoelétrica Vinh Tan 4

Acção: Ver projectos de referência

Sources: HLC Company Profile, pages 5–6; supplied CC1 Vinh Tan 4 project page.

5. Página “Sobre a HLC”

Sobre a HLC Energias Renováveis e Infraestruturas, LDA

A HLC Moçambique é uma sociedade constituída ao abrigo da lei moçambicana, membro do Grupo HLC (Vietname).

A sociedade foi constituída com um propósito definido: servir como entidade moçambicana de contratação e de execução para os projectos de energia, infra-estruturas e construção do Grupo e dos seus parceiros técnicos em Moçambique.

A estrutura é deliberada e corresponde à prática corrente dos empreiteiros internacionais na entrada em novos mercados: a entidade local assegura o enquadramento jurídico, as licenças, a mão-de-obra e o conteúdo local; o parceiro técnico do Consórcio assegura a experiência, a engenharia, a capacidade de execução e as garantias.

Informação legal

- Denominação social: HLC Energias Renováveis e Infraestruturas, LDA
- NUIT: 402198583
- Número da entidade legal: 105074676
- Sede: Av./Rua de Micaia, Bairro Costa do Sol, Quarteirão 56, Casa N.º 115, Cidade de Maputo
- Representante legal: Ngoc Ha Nguyen
- Objecto social: Produção, distribuição e comercialização de electricidade; construção de redes de transporte e distribuição de electricidade

Source: HLC Company Profile, page 2. The NUIT was visually verified as 402198583.

6. Página “Consórcio HLC–CC1”

O Consórcio HLC–CC1

Para projectos de energia e infra-estruturas em Moçambique, a HLC Moçambique opera em regime de Consórcio contratual com a Construction Corporation No. 1 – JSC (CC1). A repartição de funções é a seguinte:

HLC Moçambique — Entidade local

- Entidade contratante e de execução local

- Pessoa jurídica moçambicana
- Licenciamento
- Mão-de-obra e conteúdo local
- Logística e apoio às obras

CC1 — Parceiro técnico

- Capacidade técnica e de execução EPC
- Engenharia e gestão de projecto
- Quadros técnicos destacados
- Sistemas ISO — qualidade, ambiente e segurança
- Garantias de execução
- Capacidade financeira

Acordo de Consórcio

Perante o cliente, a HLC Moçambique é signatária dos contratos em Moçambique. A CC1 assegura o suporte técnico e as garantias nos termos do Acordo de Consórcio.

Source: HLC Company Profile, page 3.

7. Página “Capacidade técnica”

Capacidade técnica da CC1

A Construction Corporation No. 1 – JSC (CC1) é uma das mais experientes empresas de construção do Vietname. Fundada em 1979, é hoje uma sociedade cotada de capitais integralmente privados, com desinvestimento estatal concluído em 2020, e capital social de VND 3.196 mil milhões, aproximadamente USD 130 milhões. A CC1 opera como empreiteiro geral e EPC desde 2007.

Indicadores financeiros da CC1

- Receitas (2024): aproximadamente USD 406 milhões
- Activos totais: aproximadamente USD 670 milhões
- Resultado antes de impostos (2024): aproximadamente USD 13 milhões
- Capital social: aproximadamente USD 130 milhões
- Experiência: 45 anos
- Projectos de energia: 18

Certificações da CC1

- ISO 9001:2015: Qualidade
- ISO 14001:2015: Ambiente
- ISO 45001:2018: Segurança e Saúde

Nota obrigatória: Todos os indicadores, certificações e projectos desta secção constituem experiência da Construction Corporation No. 1 – JSC, parceiro técnico do Consórcio. Não devem ser atribuídos à HLC.

Source: HLC Company Profile, page 4.

8. Página “Transferência de capacidade”

Transferência de capacidade

Modelo estruturado de transferência de competências técnicas e de gestão da CC1 para as operações do Consórcio em Moçambique.

Engenheiros e gestores destacados

Destacamento de engenheiros e gestores de projecto da CC1 para as obras em Moçambique, em regime definido por projecto.

Sistemas ISO de gestão

Aplicação dos sistemas de gestão de qualidade, ambiente e segurança da CC1 — ISO 9001, ISO 14001 e ISO 45001 — a todas as obras do Consórcio.

Aprovação técnica

Aprovação técnica dos projectos de engenharia pelos quadros seniores da CC1.

Equipamentos especializados

Mobilização de equipamentos especializados pela CC1 conforme as necessidades de cada obra.

Moçambicanização dos quadros

Formação em serviço de técnicos moçambicanos integrados nas equipas de obra, com metas de progressiva moçambicanização dos quadros técnicos e de gestão.

HLC Renewable Energies and Infrastructures, LDA

Energy and infrastructure in Mozambique

HLC Mozambique is a company incorporated under Mozambican law and a member of the HLC Group (Vietnam).

The company was established to serve as the Mozambican contracting and execution entity for the Group's energy, infrastructure and construction projects and those of its technical partners in Mozambique.

Primary action: About HLC

Secondary action: Contact

12.2 Institutional summary

About HLC

HLC Renewable Energies and Infrastructures, LDA is a company incorporated under Mozambican law and a member of the HLC Group (Vietnam).

The local entity provides the legal framework, licences, workforce and local content. The Consortium's technical partner provides experience, engineering, execution capacity and guarantees.

12.3 Consortium

The HLC–CC1 Consortium

For energy and infrastructure projects in Mozambique, HLC Mozambique operates under a contractual Consortium with Construction Corporation No. 1 – JSC (CC1).

Before the client, HLC Mozambique is the signatory to contracts in Mozambique. CC1 provides technical support and guarantees under the terms of the Consortium Agreement.

12.4 Areas of interest

Areas of interest

The HLC–CC1 Consortium focuses its activities on the following energy and infrastructure segments in Mozambique:

- EPC power plants: thermal, hydro and renewable
- Transmission and distribution lines
- Substations
- Solar IPP projects: including medium-scale solutions connected to the 33 kV grid
- Rural electrification: mini-grids and isolated systems
- Civil and industrial works associated with the energy sector: large-scale civil construction within energy and infrastructure projects

The Consortium's sector coverage combines CC1's experience in large-scale energy projects with HLC Mozambique's local presence, enabling activities ranging from generation plants to rural electrification.

12.5 Commitment to Mozambique

Commitment to Mozambique

HLC Renewable Energies and Infrastructures, LDA makes a long-term commitment to the development of Mozambique's energy and infrastructure sector, based on the following pillars:

Local employment

Priority is given to recruiting and training Mozambican workers throughout all project phases.

National suppliers

Preference is given to purchasing goods and services from national and provincial suppliers.

Legal compliance

Full compliance with Mozambican legislation applicable to the electricity and construction sectors.

Institutional coordination

Permanent coordination with national and provincial authorities.

Local content as a strategic pillar of all Consortium operations.

Progressive capacity development of Mozambican personnel for operational autonomy.

13. About HLC page

About HLC Renewable Energies and Infrastructures, LDA

HLC Mozambique is a company incorporated under Mozambican law and a member of the HLC Group (Vietnam).

The company was established with a defined purpose: to serve as the Mozambican contracting and execution entity for the Group's energy, infrastructure and construction projects and those of its technical partners in Mozambique.

The structure is deliberate and reflects the standard practice of international contractors entering new markets: the local entity provides the legal framework, licences, workforce and local content; the Consortium's technical partner provides experience, engineering, execution capacity and guarantees.

HLC Mozambique — Local entity

- Local contracting and execution entity
- Mozambican legal entity
- Licensing
- Workforce and local content
- Logistics and works support

CC1 — Technical partner

- Technical and EPC execution capacity
- Engineering and project management
- Assigned technical personnel
- ISO systems for quality, environment and safety
- Execution guarantees
- Financial capacity

Consortium Agreement

Before the client, HLC Mozambique is the signatory to contracts in Mozambique. CC1 provides technical support and guarantees under the terms of the Consortium Agreement.

15. CC1 technical capacity page

CC1 Technical Capacity

Construction Corporation No. 1 – JSC (CC1) is one of Vietnam's most experienced construction companies. Founded in 1979, it is now a listed company with fully private capital following completion of state divestment in 2020, with charter capital of VND 3,196 billion, approximately USD 130 million. CC1 has operated as a general and EPC contractor since 2007.

CC1 financial indicators

- Revenue (2024): approximately USD 406 million
- Total assets: approximately USD 670 million
- Profit before tax (2024): approximately USD 13 million
- Charter capital: approximately USD 130 million
- Experience: 45 years
- Energy projects: 18

CC1 certifications

- ISO 9001:2015: Quality
- ISO 14001:2015: Environment
- ISO 45001:2018: Occupational Health and Safety

Mandatory note: All indicators, certifications and projects in this section constitute the experience of Construction Corporation No. 1 – JSC, the Consortium's technical partner. They must not be attributed to HLC.

16. Capacity transfer page

Capacity Transfer

A structured model for transferring technical and management competencies from CC1 to the Consortium's operations in Mozambique.

Assigned engineers and managers

Assignment of CC1 engineers and project managers to projects in Mozambique under arrangements defined for each project.

ISO management systems

Application of CC1's quality, environmental and safety management systems — ISO 9001, ISO 14001 and ISO 45001 — to all Consortium projects.

Technical approval

Technical approval of engineering designs by CC1's senior personnel.

Specialised equipment

Mobilisation of specialised equipment by CC1 according to the needs of each project.

Mozambicanisation of personnel

On-the-job training of Mozambican technicians integrated into project teams, with targets for the progressive Mozambicanisation of technical and management personnel.
